

RIGHT SOLUTIONS. RIGHT NOW.

Eclipse Interactive Response Technology (IRT) allows customers to better manage randomization, subject enrollment and drug supply management, ultimately saving time and money. The system was developed in response to customer demand and designed with our clients' unique needs in mind. It offers best in class functionality with a modular design that allows for flexibility, scalability and quick implementation.

Eclipse IRT allows you to easily manage randomization and drug supplies from a centralized, automated system with built-in alerts and robust real-time reporting capabilities. It also helps users avoid drug supply issues, and the troublesome consequences that come with them, by efficiently managing drug supply in real-time. It is perfectly suited for smaller, phase II trials, as well as larger, phase III trials with numerous investigational centers. The system's intuitive interface is a product of eclipse's extensive experience, hundreds of trials and customer feedback. It allows users to make faster, more informed decisions and to better manage the intricacies of each clinical trial, whether simple or complex.

About Eclipse

Eclipse is a clinical technology company that collaborates with you to deliver the RIGHT technology solutions and data management services to ensure your clinical trial is a success. We're ISO9001:2008 registered, a testament to our commitment to providing products and services that meet customer and legal requirements. Through our partnership with Oracle and our own proprietary products, we help companies leverage best-in-class technology solutions, but it's our unwavering commitment to client satisfaction that separates us from the competition. We are not satisfied until you achieve your goals - a trait our customers affectionately refer to as a genuine obsession with client service.

IRT Benefits & Capabilities Include:

- Seamless integration
- Customizable for any clinical trial
- Increased efficiency and productivity with lower error rates
- Patient randomization made easy using web-based InForm EDC system
- Unparalleled, predictive drug management functionality based on feedback from hundreds of trials
- Ability to customize drug site prioritization—many IRTs only list sites in the order they were added to the system
- Intuitive, easy-to-use interface
- Dramatic reduction in development cycles compared to IVRS
- Integrates with most other EDC systems and third-party sources, increasing efficiency, reducing redundancy and lowering costs
- Detailed reporting capabilities that can be integrated with other products from electronic data capture to lab and imaging systems
